Abstract

# Anwendungen für Alle

- Browser Bookmarklet für Forscher

The screenshot shows a web browser window displaying a Scientific American article. The address bar shows the URL: [www.scientificamerican.com/scientificamerican/journal/v312/n4/full/scientificamerican0415-14.html](http://www.scientificamerican.com/scientificamerican/journal/v312/n4/full/scientificamerican0415-14.html). The browser's bookmark bar is visible, with a yellow box highlighting two bookmarklets: "Altmetric it!" and "Altmetric Useful Links".

The article page features the Scientific American logo at the top. Below the logo, there is an "Access" section with the text: "To read this article in full you will need to log in or gain access through a site license (see right)." and a breadcrumb trail: "nature.com > Journal home > Table of Contents".

The "Advances" section includes the article title "The Persistence of Memory" by Roni Jacobson, published online on 17 March 2015. The article's DOI is 10.1038/scientificamerican0415-14.

On the right side of the page, there is an Altmetric badge showing a score of 1666. Below the badge, a list of social media metrics is displayed:

- Picked up by 1 news outlets
- Blogged by 1
- Tweeted by 2446
- On 454 Facebook pages
- Mentioned in 35 Google+ posts

A link "Click for more details" is provided below the metrics. Below the metrics, there is a "Password:" field with a "save your password" checkbox and a link "What happens if I save my password". A "Forgotten your password" link is also present.

## Future of the particle replication in nonwetting templates (PRINT) technology

Journal Article

Fulltext@MSK OPEN ACCESS

Authors: Xia, J.; Wong, D. H. G.; Byrne, J. D.; Chen, K.; Bowerman, G.; DeSimone, J. M.

Article Title: Future of the particle replication in nonwetting templates (PRINT) technology

Particle replication in nonwetting templates (PRINT) is a continuous, roll-to-roll, high-resolution molding technology which allows the design and synthesis of precisely defined micro- and nanoparticles. This technology adapts the lithographic techniques from the microelectronics industry and marries these with the roll-to-roll processes from the photographic film industry to enable researchers to have unprecedented control over particle size, shape, chemical composition, cargo, modulus, and surface properties. In addition, PRINT is a GMP-compliant (GMP=good manufacturing practice) platform amenable for particle fabrication on a large scale. Herein, we describe some of our most recent work involving the PRINT technology for application in the biomedical and material sciences. Fine print: The title technology is a continuous, roll-to-roll, high-resolution molding technology that allows the design and synthesis of precisely defined micro- and nanoparticles. This technology enables researchers to have unprecedented control over particle size, shape, chemical composition, cargo, modulus, and surface properties. Recent work involving the PRINT technology for application in the biomedical and material sciences is described. Copyright © 2013 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim.
