[flag classification](#)

Of note, only right amygdala connectivity was found to be associated with LOC in the present study. This is consistent with previous studies which reported that only the right amygdala was involved in anxiety and borderline personality disorders (Minzenberg, Fan, New, Tang, & Siever, 2007; [Phan, Fitzgerald, Nathan, & Tancer, 2006](#)). However, the lateralized effects of amygdala connectivity require further replication, considering the smaller sample size in the current study.

Section: Discussion

Amygdala functional connectivity is associated with locus of control in the context of cognitive aging
 Ren, Anthony, Chapman, et al. 2017 *Neuropsychologia*
